

NETWORK UTILITY FORCE

INFRASTRUCTURE SUPERHEROES

THERE ARE PEOPLE OUT THERE YOU CAN HIRE TO BUILD A NETWORK.
BUT ARE THEY SUPERHEROES?

Our team has an average of 20 years experience each in large-scale routing and switching environments in service providers - it gives us a unique view on how to do things right. We have performed large deployments for enterprises, experienced life inside OEMs in both sales and product development, and worked as engineers for VARs. We are broad and deep in everything networks and Internet infrastructure. We have been doing network engineering since there was such a thing.

We are **involved** and **active** in Internet standards bodies and associations of the top engineers in the industry, with a professional and personal network and an eye towards our customers that helps us keep abreast of what's important and trending. Our designs are responsible, resilient and performant... we know what it's like to be awake at 4:00AM because something went wrong because it happened to us once. We don't push customers to the latest "*new thing*" -- we wait until it's proven.

We do not sell hardware or software. Period. We sell expertise. We sell solutions. We sell successful projects delivered on time and under budget and implement networks our clients are happy with.

CALL NUF - We can build it, fix it, improve it, or understand it.

Audit	Penetration Testing	Network Integration	RFP Design/Response
Datacenter Design	Hardware Evals	Project Management	Training
GMPLS/MPLS	Wireless/Wired	Traffic Engineering	DWDM
IPv6 Migration	HPC/Big Data	Cloud Integration	IPv4 Monetization
Technical Writing	Architecture,	DNS	Peering
	Design and Deployment	Optimization	Security
